GoTrust ID Passwordless ZTA Solution | Quick Installation Guide

Part 1 : Server Environment

Environment Details

Deployment

 VM download link will be provided by GoTrust. Ubuntu is the default operating system environment we provide, please inform GoTrust if you need Windows Server instead of Ubuntu. Windows server license will be prepared by client.

VM file	Role	Operating System
	GoTrust ID Server	Ubuntu 22.04 /
mia.ova	DB Server	Windows Server 2016

Minimum System Requirement

GoTrust ID Server (incl. DB Server)				
2 CPU Core				
8GB RAM				
HDD 50GB				

HTTPS SSL Certificate

- Please prepare Public URL and its IP for GoTrust ID Server.
- Please prepare Https certificate in .pfx format which will be installed in the GoTrust ID Tomcat server.
- GoTrust ID Server will use https 443, please make sure the ports have been set up according to the table below.

GoTrust ID Server Port List

Source	Destination	Usage	Firewall Direction	Protocol	Port
GoTrust ID Mobile app	GoTrust ID Server	App and Server communication	IN	ТСР	443
GoTrust ID Desktop app	GoTrust ID Server	Desktop and Server communication	IN	ТСР	443
GoTrust ID Server	MS SQL Server	MS SQL Server Connection	OUT	ТСР	1433
GoTrust ID Server	Google FCM Server (fcm.googleapis.com)	Send FCM notification to moble app	OUT	ТСР	443
GoTrust ID Server	Public NTP Server (time.google.com, pool.ntp.org)	Time query (Optional when your server time is accurate)	OUT	ТСР	123
GoTrust ID Server	Domain controller	Import AD accounts	OUT	ТСР	389 or 636
Mobile	Google FCM Server	Mobile receive Google FCM notification	OUT	ТСР	5228-5230
Windows	Issuer of your https certificate	When Windows connects GoTrust ID Server will also connect to certificate issuer to verify your certificate	OUT	ТСР	443 and 80

Correct Time is essential to GoTrust ID Server and User Mobile Phone

 Please make sure GoTrust ID server time and user mobile phone time are correct and synchronized.

GoTrust ID Server License

• GoTrust ID Server License file will be provided by GoTrust.

AdminPortal Quick Introduction

Connect to AdminPortal

- Account and Password will be provided by GoTrust.
- Default access is from localhost at http://localhost:8080/mfa/adminportal

NOTE: By default setting, you can only access AdminPortal from localhost. If you want to access from another computer, you need to edit URL in: /home/gotrust/bin/tomcat/webapps/mfa/adminportal/config.json (example: "base_api": "https://your-domain.com:8443/mfa/api/v2/admin/")

Change Default Password

- It is highly recommended to create a new admin account and set default "admin" to disabled. If you do not create new account, at least you need to change the default password.
- To change default password, click upper-right corner -> "Reset Password". Also fill the "email" information for admin. It is required if you need to set import account from AD server.

Setup LDAP Connection to AD Server

- Following make an example for "VPN Group", you can reference this concept to create "Computer Login Group" and etc.
- Create an "VPN_Group" on AD server using "Active Directory Users and Computers". NOTE: group name is case sensitive.
- Turn on "Advanced features".

Active Directory Users and Computers								
File Action View Help

Part 4 : Desktop Login

Safeguard Workstation From Desktop Login

Passwordless Login

No password required and no password entry available.

Login Anytime and Anywhere (Online or Offline)

• Even if the computer or mobile phone is offline, user can still login via mobile phone BLE or security code or use Idem Key.

Authenticator

User can login by phone authenticator or Idem Key.

Single User Mode or Shared Computer Multiple User Mode

- Single user mode can prevent other domain user from logining your computer. Dedicated entry designed for IT troubleshooting.
- Shared computer multiple user mode can be configured by demand.

Deployment

Install GoTrust ID Desktop App

- Manually or use GPO, installation tools, antimalware services to install GoTrust ID Desktop App.
- Support Windows 10/11, macOS, Windows Server 2016/2019.
- Seamlessly fit into Active Directory login without extra settings.

Version Update Function

 GoTrust ID Desktop App version update function can be activated in AdminPortal.

Connect GoTrust ID Desktop App with GOTRUST ID Server

 Create DNS Forward Lookup Zones as business.gotrustid, Host Name as server with mapping GoTrust ID Server IP address.

🏝 DNS Manager			— C
File Action View Help			
🗢 🄿 🖄 📆 🖬 🙆	? 🖬 🗄 🗐 🛱		
 DNS WIN2016-84 Forward Lookup Zones msdcs.ttqa.gotrusti business.gotrustid ttqa.gotrustid.com Reverse Lookup Zones Trust Points 	Name (same as parent folder) (same as parent folder) (server	Type Start of Authority (SOA) Name Server (NS) Host (A)	Data [2], win2016-84.ttqa.gotru win2016-84.ttqa.gotrustid 192.168.0.83

 After configuration, GoTrust ID Desktop App will automatically connect with GoTrust ID server at first launch.

Registration and How to Manage Desktop Login Authenticator

Easy Registration

Confirm company server name and enter a company account (e.g. lynnchi@sts.gotrustid.com) and press "Next".

• Select phone authenticator to pair with your computer and press "Next".

2024 GOTRUST ID PASSWORDLESS ZTA QUICK INSTALLATION GUIDE

Type PC login password to verify it's you and press "Next".

Authentication Required To continue, type your password and click "NEXT".	
8	
Lynn Chi	
Password	
NEXT	

Open GoTrust ID mobile app, tap the floating action button and press "Get Started" on PC page to display QR code. Use phone to scan QR code.

[PC page]

[Mobile page]

 Mobile app shows the enrolled PC device and desktop app (Device Management page) lists the enrolled authenticator. User can now experience GoTrust ID computer login. Note: The last authenticator is not allowed to remove by user. If you need to change authenticator, you can remove the old one after

Desktop Login Flow

Windows example

 User will receive push notification on mobile after pressing any key on PC to initiate login process. Note: Please make sure to open GoTrust ID mobile app first if you want to use BLE to login.

 Mobile receives login request, after pressing "Agree" the user is presented with the phone's biometric authentication option (fingerprint or face ID). Once verified the user will be successfully logged in.

Recovery Options – In-App Security Code

Click "Recovery options"-> Choose "Security Code", you can see the input field.

Click the paired computer name on mobile (see the red mark below), the user is
presented with the phone's biometric authentication option (fingerprint or face
ID). Once verified the security code will be shown. Please insert the code to the
input field on PC.

The blue line under the security code on the mobile indicates the valid time for the code, which is 30 seconds.

• The input field on PC can also insert the security code the user received from a corporate administrator.

To learn how to get a security code in AdminPortal, please refer to AdminPortal User Guide Section 6. Users.

Login Method in an Offline Environment

- User can choose either way below to login
 - Mobile BLE login
 - In-App security code
 - Security code generated from AdminPortal
 - GoTrust Idem Key

Login Method when Phone is Unavailable

- User can choose either way below to login
 - Security code generated from AdminPortal
 - GoTrust Idem Key

Thank you for experiencing amazing login with GoTrust!
